

CBE Outreach Team Joins WISE to Host Young Girl Scouts

In February, the CBE Outreach Team, in conjunction with women in science and engineering (WISE), hosted over 100 girl scouts for a number of STEM-based activities. The girls spent their time with the outreach team learning about the versatility of polymers through a number of hands-on activities. For example, at one of the stations, the girls learned about polymerization by making 'goo'. Our outreach team looks forward to working with the girls again next year!
