The American Society of Automotive Engineers (SAE) is a tech-savvy organization that has been instrumental in promoting safety in automotive engineering. One of the key areas of research at SAE is the development of autonomous vehicles, which has significant implications for road safety.

SAE has conducted extensive research on autonomous vehicles, and their findings have been widely accepted by the automotive industry. This research has led to the development of new technology and safety standards for autonomous vehicles, which are being adopted by leading manufacturers.

SAE has also conducted research on the impact of autonomous vehicles on traffic safety, and the findings have been used to inform policy decisions. For example, the research has shown that autonomous vehicles can reduce the number of accidents on the road, which has led to the development of new policies to encourage the adoption of autonomous vehicles.

In conclusion, SAE’s research on autonomous vehicles has been instrumental in promoting safety on the road. The findings have been widely accepted by the automotive industry and have led to the development of new technology and safety standards.
