These are guidelines for selecting a good quality, cost effective complete mineral for cow-calf and stocker operations. They are based on meeting 50% of an animal's daily requirements with an average intake of 3-4 ounces/head/day. Use to compare mineral bags or tags. Consumption of high Mg minerals decreases significantly, if the magnesium level exceeds 8-9%. A trace mineralized salt block is not a complete mineral. No additional salt is needed. Check bag or tag for Copper Oxide and Iron Oxide, which have 0% availability – avoid such minerals.
