Mission & Policy Statement

To provide South Carolina residents with a source of accurate, dependable and unbiased information via a toll-free number (1-888-656-9988) and a comprehensive website (www.clemson.edu/hgic). This service is designed to complement the network of county Extension agents, Ag assistants and volunteer Master Gardeners by freeing the county agents to deal with commercial agriculture and horticulture questions, and to conduct programming for larger audiences. The HGIC provides over 570 fact sheets on horticulture, pests, food safety and nutrition for distribution to SC residents. The HGIC is staffed with highly qualified, degreed experts in horticulture, food safety and nutrition.

The HGIC was awarded the 2009 South Carolina Association of County Agricultural Agents (SCACAA) 1st Place Website Award.

The information found on the HGIC website is written specifically for SC residents but is applicable to much of the southeast. The HGIC website received 6,356,862 visits last year with over 32,000,000 hits from people in over 220 countries.

The site has several sections, including Fact Sheets, Hot Topics, Test Your Knowledge, Videos, and South Carolina Updates.

Fact Sheets

Thirty-three new fact sheets were written for a total of 577 fact sheets. In addition, 137 photos were processed, edited and added to 48 new and existing fact sheets. Updated pesticide recommendations were added to 15 fact sheets. Topics of these fact sheets range from landscaping, indoor plants, and vegetable gardening to food safety and nutrition.

Award-Winning Fact Sheets

HGIC 1327, Basil, SCACAA 1st Place Publication Award
HGIC 2318, Cogongrass, SCACAA 1st Place Fact Sheet Award
HGIC 2316, Bahiagrass, SCACAA 3rd Place Publication Award
Award-Winning Website (continued)

Hot Topics

Each month timely topics are featured in this section of the website. This proactive approach keeps the residents of South Carolina informed on topics that are frequently asked about by clients. The plant topics range from proper plant care to a wide range of insect and disease problems. The food safety and nutrition topics are geared toward helping citizens make wise food choices, safely prepare and preserve food, and maintain an overall healthier lifestyle.

Award-Winning Hot Topics

Harvesting & Curing Gourds, SCACAA 2nd Place Fact Sheet Award
Leaves Turning Black?, SCACAA 3rd Place Fact Sheet Award

Test Your Knowledge

Each month a new “Test Your Knowledge” quiz is added to the website. These quizzes are a fun way to engage the citizens of South Carolina in learning more about the world around them.

The quiz features a photograph of plants, insects or diseases to identify with a list of multiple choice answers. Once the correct answer is selected, the client is taken to a web page with detailed information about the subject.

Web Videos

The HGIC staff produced 14 high definition web videos. These videos are available through the HGIC website (www.clemson.edu/hgic), YouTube, and iTunesU. These videos cover the cultural needs of trees, shrubs, annuals and perennials, as well as managing disease and insect problems.

Drought Updates

To keep South Carolina residents up to date with the drought situation, updates are provided on a weekly basis from April to November using data from the USDA-NASS South Carolina Field Office.

Food Recalls

These updates provide easy access for South Carolina residents to know which food recalls could affect them. Approximately 77 food recalls were posted in the 2008-2009 fiscal year.

Don't Let Your Thanksgiving Turkey Make You Sick!

Perla S. Bhimula
Home & Garden Information Center

This Thanksgiving, even if your turkey has a pop-up thermometer, lose your turkey's temperature to make sure it's cooking. Turkey is safe to eat when the internal temperature is at least 165°F.

The only way to check this is to use a thermometer by inserting the probe of the high side. If it is zero, the internal temperature of your turkey is safe to eat. The internal temperature of your turkey is safe to eat when the internal temperature is at least 165°F.

The only way to check this is to use a thermometer by inserting the probe of the high side. If it is zero, the internal temperature of your turkey is safe to eat. The internal temperature of your turkey is safe to eat when the internal temperature is at least 165°F.
Training Master Gardeners

The HGIC staff organized and taught classes for Master Gardeners.

At the end of the year, the Pickens County Master Gardeners participated in hands-on training in which they had the opportunity to put their knowledge to work by identifying various plant samples and solving consumer horticulture landscape problems.

A basic plant pathology course was presented to the Richland and Lexington county Master Gardeners via Adobe Connect. This class helped prepare Master Gardeners to accurately di

Investing in Our Future

Seminars were given to Clemson University horticulture students. These seminars gave students an opportunity to ask questions about Clemson Extension and the work that is involved on a day-to-day basis. We also reviewed several real-world examples of questions clients ask. Afterwards, students were asked to participate in role playing, in which they were the Extension agent evaluating the situation to give the client an answer to the problem.

Sunbelt Ag Expo 2008

The Clemson Cooperative Extension Service highlighted horticulture at the 2008 Sunbelt Ag Expo in Moultrie, GA, held October 13-16. The HGIC attended and organized a project to involve adults and children in horticulture. Materials to “Pot up a Pansy” to take home were donated from four companies. With this project, children and adults were able to get hands-on experience with plants and take one home to watch it grow. The Sunbelt Ag Expo averages over 100,000 attendees in a 3-day period.

SC Botanical Garden’s (SCBG) Garden Fest: Building Communities, Growing Vegetables

In response to SC resident’s ever-increasing interest in growing vegetables and obtaining locally grown produce, the SCBG held a Garden Fest to help answer their questions and make their efforts more rewarding. Two HGIC staff members manned the Keeping Things Growing information center.
Consumer Impacts

Home Lawn Care IPM (Integrated Pest Management)

In February 2009, a Home Lawn IPM workshop was held for residents in Greenville County, SC. Many in attendance were Clemson Extension Master Gardeners, who volunteer their time assisting homeowners with lawn care and problem solving.

The importance of proper turfgrass maintenance (i.e. mowing technique, fertilization, and irrigation) and correct pest identification were discussed. Cultural control measures were encouraged to prevent turf problems with pesticide recommendations being a last choice, and only after there was a good understanding of safe application, not only for the safety of homeowners and their families, but also for their neighbors and the environment.

All of the attendees said they learned useful information to aid them in making home lawn care recommendations. Ninety per cent (90%) said that they learned to solve home lawn care problems with the use of fewer pesticides.

Award-Winning Notebook

Home Lawn Care IPM, SCACAA 2nd Place Learning Module Award

USDA-CSREES Grant

A USDA-CSREES (now the USDA-NIFA) grant was awarded to fund two future Home Lawn IPM workshops in 2010.

Pesticide Recommendations

The HGIC assisted the Clemson Plant Problem Clinic with 30 insect pest control recommendations for residential landscape problems. These replies included relevant information on the life cycle of the insect pest, and cultural and chemical pest control measures.

Food Safety

Food Safety information was provided for community outreach activities in the Upstate region including at a retirement center and a local high school.

To provide accurate canner testing in the counties, the staff evaluated the need for updated testing equipment and developed a form to report results to consumers.
Commercial Impacts

Southeast Greenhouse Conference
Staff participated in the Southeast Greenhouse Conference in Greenville, SC.

A staff member served as a panelist in the Vegetable: Cultivars, Uses and Marketing session. Information was provided to the greenhouse grower audience about what new and experienced gardeners are looking for in vegetable gardening today.

Two sessions of a hands-on disease identification workshop were conducted. Participants used microscopes to identify common diseases occurring on greenhouse crops.

Environmental Landscape Certification (ELC)
With a grant from the South Carolina Landscape & Turfgrass Association (SCLTA), the HGIC staff revised and expanded the Environmental Landscape Certification Plant List and Details. The list was updated to include about 300 popular South Carolina landscape plants with color images, proper botanical names and culture, including height, width, form, foliage, USDA hardiness zones, origin, site requirements, flower/fruit information, growth rate and comments. A total of 1,045 images were processed, edited and used to illustrate the training CD for SCLTA. This information is available through the SCLTA ELC program to improve the knowledge of professional landscape companies. This will prevent companies from planting trees, shrubs, perennials, and vines in an area with the wrong cultural requirements.

Carolinas Golf Course Superintendents Association (CGCSA)
A day-long course on microscopic identification of turfgrass diseases was presented to golf course professionals at the CGCSA Conference in Myrtle Beach, SC. This program helps turf professionals accurately identify turf diseases. With this knowledge, turf professionals can modify environmental conditions, when possible, to prevent future disease problems, avoiding the use of unnecessary chemicals.

HGIC Image Library
A total of 1,878 new photographs, including images of ornamental and edible plants, horticultural techniques, materials and tools, weeds, insects and pests were added to the HGIC Image Library. These will be used to provide visual information in future facts sheets and on the website.
In Print and On Air

Your Day Radio
The HGIC staff participated in 6 Your Day Radio call-in shows in 2008/2009. Through this show staff members were able to assist South Carolina residents with landscape and plant problems. Your Day airs on 8 public radio stations and is available online through live web streaming.

Your Day radio airs Monday through Thursday from 12:00 noon to 1:00 pm EST.

Carolina Gardener Magazine
An HGIC staff member became the Midland Regional Reporter for Carolina Gardener magazine beginning in May/June 2009. Carolina Gardener magazine is written by and for Carolina gardeners. Over the years the Carolina Gardener magazine readership has expanded across the Southeast.

Nutrition Newsletters
Eight nutrition articles were published in these newsletters:

- Nourishing News
- EFNEP Digest
- Healthy SC Challenge

Topics ranged from Controlling Holiday Weight Gain to Making Meal Times Pleasant.

Nutrition on iTunesU
Digital recordings of 26 nutrition fact sheets were made available on Clemson University’s NIRC web site (www.clemson.edu/itunesu).

PSA Vision Statement
To provide leadership in food, fiber, environmental sustainability and human health systems through innovative research and education programs that will drive economic development and improve quality of life.

PSA Mission Statement
Stimulating innovation and strengthening agriculture and natural resources through leadership and partnership to enhance economic development. To meet the current and future needs of South Carolina’s agriculture and natural resources industries, we also examine and refine the missions for each of the units in the statewide system.
