Homestead Acres is a small, family-run farm near Newberry, South Carolina. Depending on the season, we will offer heirloom vegetables, herbs, pastured-raised eggs, pastured-raised heritage meats, and occasionally honey from our hives. Our heirloom produce and heritage meats both provide a delicious taste of history, while protecting the diversity of our food variety. We feel that local farms are a vital part of community sustainability. Locally grown food provides a wealth of benefits, and assures us at Homestead Acres that those in our community have access to high quality, fresh food. As the farm further develops, we will also provide farms tours and educational opportunities. Stop by our website at www.HomesteadAcres-SC.com. Eat local, eat fresh!

Outstanding alpacas offered affordably, OnAgain OffAgain Farm is home to award winning alpacas in Spartanburg, SC. We raise and sell breeding stock as well as alpacas for fiber and pets. Alpacas are “green” animals in that they produce a renewable yearly product and are easy on the environment. Gardeners cherish their manure. Their fiber is hypoallergenic and warm, lending itself to a variety of uses from fine garments to insulation. In addition to animal sales we offer raw fleece and yarn as well as breeding and shearing services. We believe in helping new farmers establish their herds and are with them before, during, and after the sale.
Wren’s Nest Farm is part of what was the Pine Grove Plantation, established by land grant in 1706 and abandoned when union troops invaded the Sea Islands in 1861. The farm’s primary goal is to restore the property to grow the finest varieties of onions, melons and other specialty vegetables for local sale. Our light soil, warm coastal climate and clean water guarantee the best possible growing conditions to produce safe and healthful crops. Customers are delighted by our unique products - for example, we are the only commercial grower of delicious Italian Tropea onions in the state. The cage-free hens that help fertilize our fields and the bees that pollinate our crops also provide a plentiful supply of fresh eggs and Sea Island honey.
