## INTRODUCTION

This manual contains weed control recommendations for corn, cotton, grain sorghum, peanut, soybean, sunflower, tobacco, wheat, forage crops, and wild life plots. The recommendations contained herein, are intended to assist producers in planning weed control programs. This manual is not intended to replace herbicide labels. Be sure to read, understand, and follow directions and precautions on the label. According to laws regulating the sale and use of agricultural chemicals, they must be used in strict accordance with the label. To do otherwise is a violation of federal law. Herbicides recommended in this publication were registered for the prescribed uses when the publication was printed. Herbicide registrations and labels are constantly being reviewed and revised. Should the registration of a recommended herbicide be canceled, it would no longer be recommended by Clemson University.

To protect people, livestock and wildlife animals, and the environment, pesticides should be used safely. This is everyone's responsibility, especially the user. Read and follow label directions carefully before you buy, store, mix, apply or dispose of a pesticide.

Use of brand or trade names in this publication is for clarity and information; it does not imply approval of the product to the exclusion of others which may be of similar, composition. It does not guarantee nor warrant the standard of the product.
