

# Poison Control Center

In case of a pesticide poisoning, the family physician should be called immediately. Advise the physician of the pesticide involved and, if possible, take the container with intact label to him or her. In the event the physician is not familiar with the pesticide, its antidote, and symptoms of poisoning, the nearest Poison Control Center should be contacted.

The Palmetto Poison Center serves as the Regional Poison Control center for the State of South Carolina and is the only poison control resource in the State. The Center is a cooperative effort of Palmetto Richland Memorial Hospital and the U.S.C. College of Pharmacy. The regional model assumed by the center consists of one central poison control information center and multiple hospital treatment sites throughout the State. The center is widely recognized and heavily utilized throughout the State.
