

Human Skeletal Analysis in Hungary

CLEMSON
SOCIOLOGY, ANTHROPOLOGY
and CRIMINAL JUSTICE
Study Abroad

Overview

This is a unique opportunity for students to examine human skeletal material held at the University of Szeged in Hungary. The collection contains the skeletal remains from over 30,000 skeletons recovered from archaeological excavations from southern Hungary dating from the Neolithic to the 1800s. Students will systematically collect standard anatomical skeletal data from one archaeological collection consisting of approximately 100 skeletons.

Students will have the opportunity to visit Budapest – a beautiful European capital that offers many interesting cultural attractions. Students will also visit Opusztaszer. This is located 30 minutes north of Szeged. At the Heritage Park students will visit archaeological excavations of a medieval monastery, a living open-air museum with a replica of a village and displays of traditional Hungarian horsemanship.

Course Delivery

ANTH/BIOL 4550 Field Studies in Biological Anthropology
4 credit hours

*The academic program will consist of four credits. Students participate in field study experiences related to biological anthropology. The focus of the field studies is on practical aspects of human skeletal biology, paleoanthropology, primate behavior, or other related field study. Students are trained in data collection methods and analysis utilized within biological anthropology. May also be offered as BIOL 4550. Preq: Junior standing.

Program at a Glance

Locations

Szeged
Budapest
Opusztaszer

Dates

June 28 - July 8

Application Due Date

February 1
