ABOUT ME:
I am a graduate student in the Department of Engineering and Science Education at Clemson University. I earned my BS from Virginia Tech and MS from The University of Tennessee, Knoxville, both in chemical engineering. My research interests include choice and decision making, especially relating to major selection, persistence, and career choice. My advisor is Dr. Marisa Orr.

I’M INTERESTED IN THESE RESEARCH QUESTIONS:
• What factors do first-year engineering students consider most salient during their engineering discipline major selection process?
• How do the factors that first-year engineering students consider the most salient during their engineering discipline major selection process vary with matriculation models?

INTERESTED IN COLLABORATING?

I HAVE TO OFFER:
• Experience with institutions with varying matriculation models for first-year engineering students
• Working knowledge of the MIDFIELD database

I AM SEEKING:
• Opportunities to collaborate on multi-institution, quantitative data collection for future research projects
• Collaborative research in the understanding the factors first-year engineering students consider in major selection at different institutions
