

OPTIMIZATION FOR FLEXOGRAPHY SEMINAR

SEE WEBSITE FOR DATES

There are many variables in flexographic printing that affect quality and printability. Managing those variables can be a daunting task. This 2.5 day seminar breaks down the strategies to optimize several of these variables – whether it's determining the proper plate screening, finding the right ink and anilox combination, or choosing the right doctor blade. Hear from suppliers and other experts on how to properly conduct optimizations and put those theories to work with hands-on activities in the Advanced Print Lab at Clemson, so that you and your team can approach this task with confidence!

Who should attend?

- Print Managers
- Process Improvement Teams
- Press Supervisors
- Plant Managers
- Process Engineers

Class participants will decide the following for the final print day:

- Anilox Rolls
- Inks
- Doctor Blades
- Plates
- Stickybacks
- Screening options

RATES:

- \$995/person
- \$895/person for early bird or 3+ registrants
