

CU STEM All In is a series of events for current Clemson University STEM undergraduate students wanting to learn more about graduate school and pursuing careers with industry using a graduate degree.

This year we will feature three sessions to prepare students to consider M.S. or Ph.D. STEM programs, successfully apply to top-tier graduate schools, educate students on funding opportunities, and introduce them to graduate student life on an R-1 campus. There will also be industry presentations and networking events. In celebration of 100 years of graduate studies at Clemson, CU STEM All In will conclude with a dinner featuring a guest speaker and an industry career panel. These events are ideal for 3rd- and 4th-year undergraduate students who are interested in pursuing graduate education.
