Clemson University Plant Problem Clinic, Nematode Assay Lab and Molecular Plant Pathogen Detection Lab Semi-Annual Report For 2013 (January-June)

The Plant Problem Clinic serves the people of South Carolina as a multidisciplinary lab that provides diagnoses of plant diseases and identifications of weeds and insect pests of plants and structures. Plant pathogens, insect pests and weeds can significantly reduce plant growth and development. Household insects can infest our food and cause structural damage to our homes. The Plant Problem Clinic addresses these problems by providing identifications, followed by management recommendations. The Clinic also serves as an information resource for Clemson University Extension, teaching, regulatory and research personnel.

As a part of the Department of Plant Industry in Regulatory Services, the Plant Problem Clinic also helps to detect and document new plant pests and diseases in South Carolina. The Molecular Plant Pathogen Detection Lab is vital to the effort of detecting regulated pathogens, especially in support of Cooperative Agricultural Pest Surveys and, on occasion, from Plant Problem Clinic samples.

In the first half of 2013, the Plant Problem Clinic received 524 samples. The continued success of the Plant Problem Clinic could only be accomplished through the cooperation of numerous individuals in various disciplinary areas across the Clemson University system. A listing of our collaborators, showing the number of samples with which they assisted, follows.

The Nematode Assay Lab, directed by Dr. Paula Agudelo, located within the Department of Entomology, Soils and Plant Sciences, provides the valuable service of identifying plant parasitic nematodes in soil samples sent through the Clinic. The Nematode Assay Lab received 855 samples from January through June in 2013. Many of these samples are in support of research performed by Clemson University faculty in Agricultural Sciences.

Each summer, we are assisted by Clemson University students or, in some cases graduates or graduate students. This year, Mr. Mark Chestnut, a graduate with a B.S. degree in Biology, worked in our lab. He put this report together and we appreciate this effort and all the additional help he has provided throughout the summer.

Diagnostic Inputs

Primary Identifiers Providing
Diagnoses/Identifications for the Clinic in 2013

Meg Williamson diagnosed 416 samples.

Tim Drake diagnosed 103 samples.

Dixie Damrel diagnosed 52 samples.

Curt Colburn diagnosed 12 samples.

John Hains diagnosed 3 samples.

Julia Kerrigan diagnosed 2 samples.

Consultant Inputs

Advisory Consultants Providing Management
Recommendations for the Clinic in 2013

Eric Benson gave advice for 29 samples.

Corey Heaton gave advice for 22 samples.

Joey Williamson gave advice for 22 samples.

Bob Polomski gave advice for 15 samples.

Mike Marshall gave advice for 6 samples.

Sally Brock gave advice for 5 samples.

Juang-Horng 'JC' Chong gave advice for 4 samples.

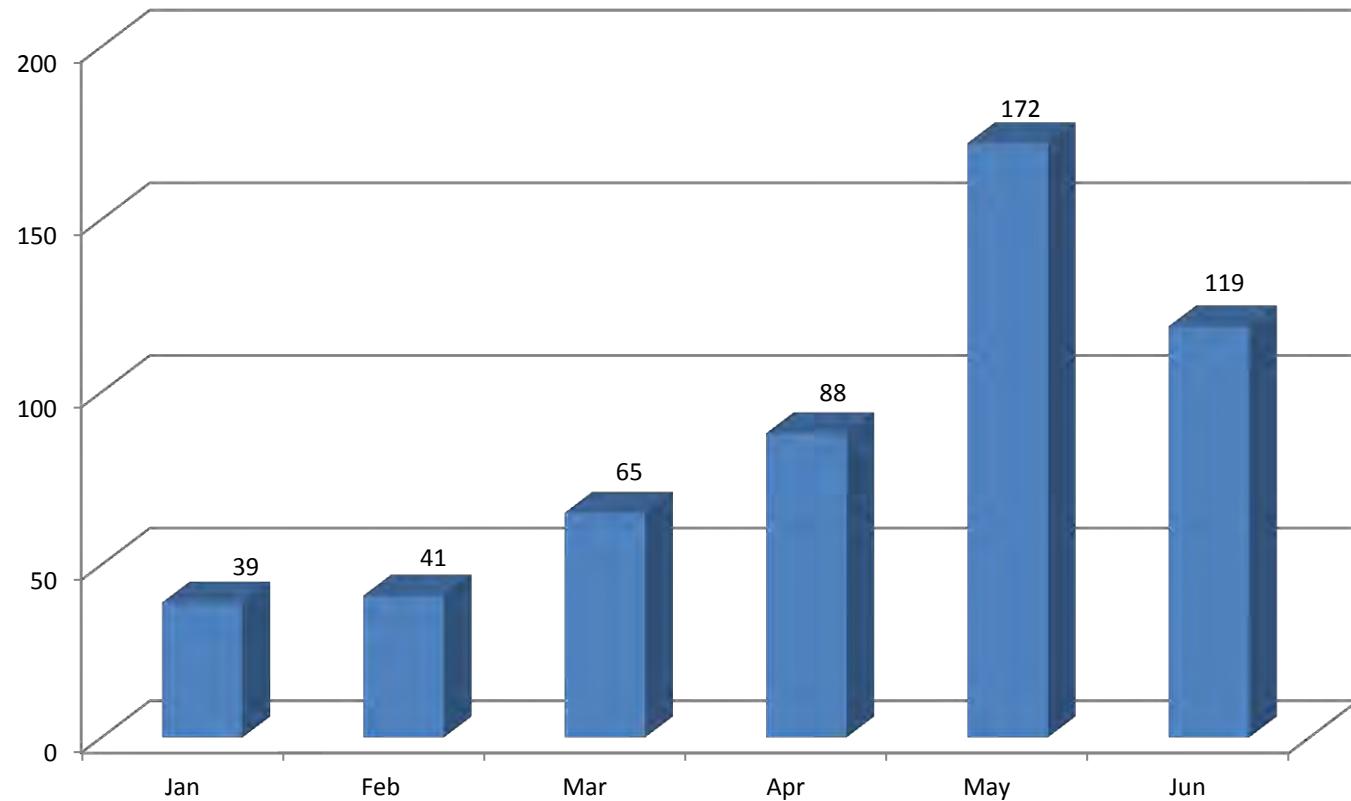

Powell Smith gave advice for 3 samples.

Bruce Martin gave advice for 2 samples.

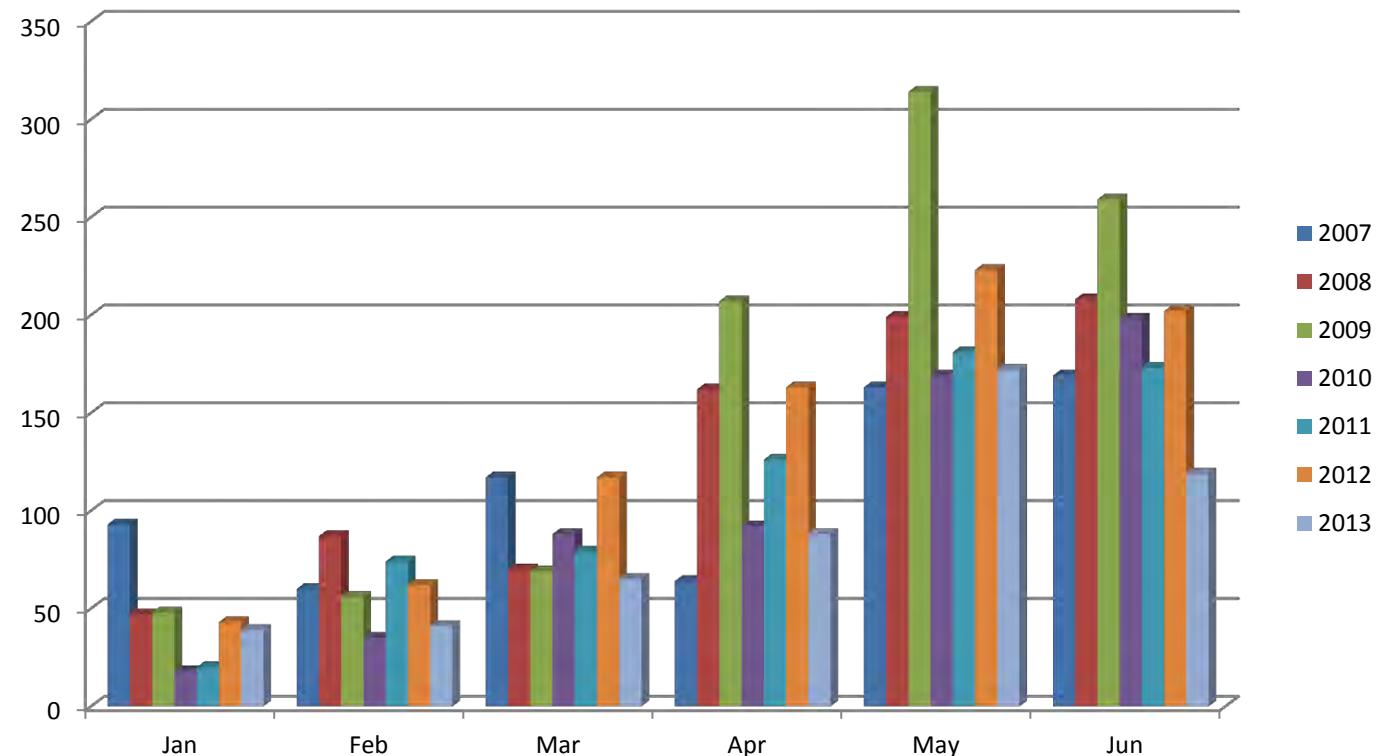

John Andrae gave advice for 2 samples.

John Rogers gave advice for 1 sample.
